

Royal Kennel Club

The Royal Kennel Club Heart Scheme for Cavalier King Charles Spaniels
Supported by the Veterinary Cardiovascular Society
Data collected to 30.06.2026

The following are individual dog's results for the Royal Kennel Club Heart Scheme for Cavalier King Charles Spaniels. Greyed entries indicate a more recent result is available for that individual.
Age at test is measured in months.

The breeding advice based on this scheme varies depending on the two grades that your dog receives, and also the age they are tested.

- Green** - These dogs have the lowest risk of developing clinical MVD and the lowest risk of passing the condition on to any offspring.
- Amber** - These dogs have a higher risk of developing and/or passing on the condition to offspring. Only amber dogs that are in excellent health, and have good results from other screening schemes, may be used cautiously for breeding, and only with a mate categorised as green, preferably at 4 years of age or older.
- Red** - These dogs have the greatest risk of passing the condition to offspring and so should not be used for breeding.
